

Nguyễn Văn Hiệu

Senior Process Engineer

Senior Process & Quality Engineer with more than 8 years of expearance in mechanical parts assembly at Canon Vietnam. Extensive experience in process development, quality improvement. Leading New Product Introduction (NPI), project management and continue improvement. Leading cross-functional improvement projects that reduce defect, improve yield and achieved cost saving. Experience in working directly with Japanese Engineering Team, window contact between Japan & Vietnam.

Skills

Process Engineering

Process Optimization
Cycle time reduction
Yield improvement
NPI
Root cause analysis
DFMEA,PFMEA
PDCA
8D analyze
Kaizen
5S

Software & Data analysis

Microsoft Excel/ Word
Microsoft PowerPoint
NX

Soft Skill

Problem solving
Project management
Cross-functional collaboration
Leadership

Work Experiences

NPI Leadership, Senior Process & Quality Engineer / **Canon Vietnam**

07/2018 - Now

- **Key Achievements**

1. Achieve front loading merit by 812k$ (178k$ from reduce die cost, reduce 634k$/ year from part cost).
2. Improve First Pass Yield from 97.5% to 99% by strengthen improve Design, JIG, Process.
3. Leading NPI success by transfer 4 printer model from Japan to Vietnam, achieving on-time launch rate 100%.
4. Lean factory to achieve reduce 2OP/cell by Slimcell activity through cycle time reduction, checker less and process optimization initiatives.
5. Leading solving 5 case customer claim by using 8D,5Why, Fishborn to deeply study root cause and change design.

- **Responsibilities**

1. Leading Engineer Team deeply study, optimize design, process by analyze CBOM, FMEA, JKK.
2. Setup target and assign job for OPR Team, improvement & trouble shoting by apply root cause analyze (5 Why, PFMEA, Fisbone diagram),
3. Leading Engineer team for study & kaizen from design phrase until mass production by using DFMEA, QBOP, JKK.
- Window contact with designer at JAPAN to transfer information & catch up target, plan of project.
- Collaborate with QA, R&D and Production department to improve efficiency.
- Develope and standardize technical document such as BOM, Work instruction (WI), JIG specification and Design guideline.
4. Monitor KPI performance and identify improvement opportunities of Engineering Team to achieve target from policy SEQCDF of Factory Manager.

Languages

Vietnamese : Native
English : Professional working proficiency
Japanese : Basic (N5)

Certificates

August-2018::
Presentation Skill training by MIMAX Training&Consultancy

August-2018::
Planning Skill training by MIMAX Training&Consultancy

July-2024::
ISO 9001:2015 Internal Auditor

July-2024::
Canon Innovative Manufacturing Solutions Leader Course

Education

Mechnical Engineering / Hanoi University of Industry

09/2014 - 04/2018

- GPA : 3.01/4
- Graduation Project: Design manufacturing and production process for Non-stick frying pans

- Using solidworks & CAD to design and make manufacturing process.
- Using Excel, Word, Powerpoint to make document for manufacturing process and Product Technical Specification.

Projects

New Product Introduction (NPI)

6/2019 - 4/2023

Role : New model Leader
Objective
Leading transfer new products from Japan to Vietnam on schedule and successful for mass production.
Actions
- Control plan to achieve on-time product launching by PDCA.
- Coordinate cross-functional teams (R&D, Engineering, Manufacturing, Quality, Supply Chain, Purchasing).
- Drive process optimization before mass production by analyze QBOP,CBOM,JKK.
- Cost target achievement by optimize design.

Results
- Completed the project on schedule.
- All problem have permanent countermeasure before mass production.
- No major quality issues occurred.
- Achieve cost down merit from front loading 812k$.

Yield Improvement

05/2023 - 08-2026

Role: Project Leader EngineeringTeam
Objective
Reduce checker fail on main cell
Actions
- Set up Yield improvement target
- Drive root cause analysis by using 8D, 7QC tool, 5 Why, FMEA.
- Lead Cross-Functional Collaboration (Quality, Design, Production team).

Results
- Yieldimprovement increase from 97.5% to 99% in 1.5 month
- Checker Cpk achieve >1.33 higher than 80%
- Reduce defect and saving cost average 4.5k$/year by study change design.
